MEMBER GUIDE / ENGLISH / 01

Welcome to your VYOMA workspace

Start here to access your account, read the desk's macro research and use VYOMA chart tools. The chapter map below also covers model research and support.

> **Active VIP includes Macro fundamentals and chart analysis tools.** VYOMA trading models are a separate research and execution system. Access to tools does not automatically activate a model or connect a trading account.

01	Log in and choose your personal password
02	Check VIP status and expiry in My dashboard
03	Read the Macro fundamentals report for your symbol
04	Open VYOMA to practise with chart tools and Bar Replay

Find the right chapter

Pages	What you will learn
02–03	Account, mobile Menu and the Macro fundamentals report
04–07	Chart navigation, Zones, FVG, indicators, drawings and position boxes
08–10	Bar Replay, model workflow, journal and alerts
11	Renewal, troubleshooting and support

Edition 1.2 · 15 November 2026

For desktop and mobile browsers. Button names in this guide match the English interface. Features and access can change; the website shows the current status.

MEMBER GUIDE / ENGLISH / 02

01 / First login & your account

1. Open the latest welcome email. Check the email address, free access duration and exact expiry shown there. Keep the one-time code private.
2. Open pratikalgo.com/login. Enter the same email and the latest 9-digit one-time password. Keep leading zeros; do not use an older email after a resend.
3. The first-login setup asks you to create and confirm a new personal password of 12-128 characters. Review and accept the displayed terms, then submit.
4. After setup, use your personal password for future logins. The emailed code is valid for 7 days and one use; it is not your permanent password.
5. Open My dashboard and find **Your VYOMA membership**. Check the status and expiry in IST.

Account label	Meaning
Normal account	Free access, or VIP has expired.
VIP admin grant account	VIP granted by the administrator, including complimentary access.
VIP paid account	VIP activated or renewed after verified payment.

Find your way on mobile

Open **Menu** in the member dashboard. Under **VYOMA**, choose **Macro Fundamentals** for research. Under **Guides**, choose **English guide (PDF)** or **हिंदी गाइड (PDF)**. On desktop, both guides are on your membership card.

> Already have an account? Keep your existing password. An admin grant does not reset it. Use Forgot password? if needed. Never share your password or one-time code with support.

MEMBER GUIDE / ENGLISH / 03

02 / Read a Macro fundamentals report

Active VIP members: open Macro fundamentals from the sidebar or membership card in My dashboard. On mobile, open **Menu**, then **VYOMA** and **Macro Fundamentals**. Choose your symbol in **Market board**.

Coverage: Gold (XAUUSD), Silver (XAGUSD), WTI, Brent, the US Dollar Index (DXY), and EURUSD, GBPUSD, USDJPY, USDCHF, USDCAD, AUDUSD and NZDUSD.

Read the meter in the direction of the symbol

Strong Sell · Sell · Neutral · Buy · Strong Buy. A Buy view on EURUSD favours EUR against USD; on USDJPY it favours USD against JPY. Neutral is a published, balanced view. **Awaiting report** means no rating has been published.

In the report	How to use it
Research note and timing	Data through is the latest evidence covered; Last published is when the note went live (both in IST). There is no fixed update date. The desk can revise a report after new data or market news. Older report marks a past assessment.
Release evidence	Compare Actual with Forecast, when available, and Previous for the same release and unit. Check the source. A dash means unavailable, not zero.
Full analysis	Look for the risk specific to this market: a supply disruption can affect oil differently from safe-haven demand for gold. Read the reasoning for the selected symbol.
What could change the view?	Look for a release, policy change or geopolitical development that would weaken the case. Recheck when new evidence arrives.

> **One week** is the desk's research horizon when shown. It is not a chart timeframe, a holding period or an entry. Use your chart to study price, define what would invalidate your setup, and decide whether to act. A macro rating does not trigger a trade.

MEMBER GUIDE / ENGLISH / 04

03 / Open and navigate the chart

1. Open pratikalgo.com/vyoma, then **Open the live desk**. Check the symbol, Bid / Ask and last quote time.
2. Select a timeframe: use the M1, M5, M15, H1, H3 or H4 shortcuts, or the timeframe dropdown for other available intervals. Each interval needs its own candle history.
3. Move the pointer across the price chart to inspect candles. Drag to pan, and zoom for a closer view. On touch devices, use the chart gestures; landscape orientation gives more room.
4. Use **Vol** to toggle tick volume, the chart-style button for candles / area, **Fit chart** to fit the loaded data, and the expand icon for a larger chart.
5. Choose IST or UTC from the timezone control where displayed. Read the available-history range below the chart before reviewing an older period.

Read the feed before using the tools

What you see	What it means
Last quote / no recent ticks	The latest received quote may be old. Market closure or a feed delay can stop updates.
Reported candles	Candles received from the connected reporting source.
Simulated candles	Preview data, not a live market record.
Available chart history	Only that loaded window is available. Blank space does not prove there were no earlier candles.

> Changing timeframe or returning from replay can change the visible range. The chart cache is not a complete backtest dataset.

MEMBER GUIDE / ENGLISH / 05

04 / VYOMA Zones & major FVG

1. Open **Chart tools** and enable **VYOMA Zones + FVG**. Choose the timeframe you want to study.
2. Green **VM Zone · Support** and red **VM Zone · Resistance** show selected price areas. Follow how price approaches, rejects, retests or closes through the area.
3. A completed close outside the zone body can flip its role. A wick alone does not flip a VM Zone. Review the new label after the candle closes.
4. A green **FVG** is bullish; a red FVG is bearish. Only selected major gaps are shown. The first retest, including a live wick touch, stops the box from extending further.
5. A closed break beyond the far edge marks **iFVG**. Treat this as changed gap context, not an automatic reversal entry.

Tool	Current selection rules
VM Zone	Last 100 completed candles; swing with 3 closed bars on each side; qualifying nearby candle body and departure of at least 1 ATR.
Major FVG	Gap at least 0.30 × preceding ATR14; directional middle-candle body at least 0.80 × ATR14.
Clutter control	Strong, non-overlapping gaps: up to 2 bullish + 2 bearish active, plus 2 recent used gaps.

> Zones use completed candles. A swing needs later candles to confirm, so it is not known at the swing candle itself. Tick volume is broker price-update activity, not total exchange volume. No visible zone can also mean the criteria or history are insufficient.

MEMBER GUIDE / ENGLISH / 06

05 / Indicators, drawing & measurement

Expand **Chart tools**. Click an indicator button to turn it on; click again to turn it off. ATR14 is shown as a value in the tools summary when enough data exists.

Indicator	How to read the display
EMA 20 / 50 / 200	Moving averages with different lookbacks. EMA200 needs at least 200 bars.
SMA 20	Simple average of the last 20 closes.
Bollinger 20 / 2	Middle average and two surrounding bands.
RSI 14	Separate oscillator pane with 30 and 70 reference lines.

1. **Horizontal level:** select it, then click one price on the chart.
2. **Trendline:** select it, then click two different candles at the desired prices.
3. **Fibonacci:** click two anchors. First anchor = 100%, second = 0%; the values panel lists the levels.
4. **Measure:** click two candles to see price change, percentage, number of bars and minutes.
5. Return to **Cursor** or use Cancel drawing. Use **Undo drawing**, **Clear drawings** or the individual Remove buttons to tidy the chart.

> Indicators can include the forming candle, so their latest value can change. Drawings are stored in this browser by source, symbol and timeframe; they do not automatically sync to another phone or computer.

MEMBER GUIDE / ENGLISH / 07

06 / Long & Short position boxes

1. Set **Lots** beside the Long / Short shortcuts. Choose **Long position** or **Short position**, then click once at your planned entry price.
2. Drag inside the box to move it. Drag Entry, SL or TP lines to change prices. Drag its right edge to change width; the initial box is 12 bars wide.
3. Click a box to select it, then change Lots to update that box. With nothing selected, Lots applies to the next box. Click empty space or press Escape to deselect.
4. On desktop, select a box and press **Delete**. Use **Clear all boxes** beside the shortcuts to remove all. On mobile, expand the box settings and use **Remove box**.
5. For exact prices, open the box settings, edit Entry / SL / TP / Lot size and press **Apply settings**. Up to five position boxes are kept.

Illustrative example only. Entry 4000, SL 3990, TP 4020, 0.10 lots: risk 100 pips / $100, reward 200 pips / $200, R:R 1:2. Not a current trade.

> Fixed XAUUSD convention: 1 pip = 0.10 price units; 1 lot = 100 oz. Estimated USD = price distance × 100 × lots. A $100 move at 1 lot is $10,000 before costs. Pips and R:R do not change with lots; the estimated cash amounts do. Boxes place no broker orders and exclude spread, commission and swap.

MEMBER GUIDE / ENGLISH / 08

07 / Practise with Bar Replay

1. Choose the symbol/timeframe and inspect the available-history dates. Load the period you want before starting.
2. Click **Backtesting · Bar Replay**. The chart captures the available closed-candle history for this replay session.
3. Click or tap a historical candle. The chart cuts there and hides later candles. The background reads **VYOMA CHART BACKTESTING**.
4. Use **Play** / **Pause**, or **Next candle** to advance one bar at a time. Speeds are 0.5, 1, 2 or 5 candles per second.
5. Use zones, indicators and position boxes to practise a consistent reading. Record your entry idea, invalidation and outcome yourself.
6. Use **Select start candle** to choose another point, or **Exit replay · Back to live** when finished. A timeframe/source change ends the current replay.

01	Choose a past candle
02	Hide the future
03	Advance one candle
04	Review your decision

> Bar Replay is manual candle-by-candle practice, not an automated strategy backtest or a simulated trading account. It does not execute orders or automatically calculate realised P/L. Live quotes and trades are hidden while replay is active. Replay drawings/boxes are temporary; the frozen window does not grow with new live candles.

A useful practice routine: choose one setup, decide the invalidation before advancing, record both wins and losses, and repeat over different market conditions. Do not treat a few good examples as proof of profitability.

08 / How the models work

A model is a strategy candidate with its own timeframe, entry conditions, risk controls and exit rules. The learner researches candidates; the execution system applies approved controls to a connected account. This work is separate from your manual chart tools.

01	History quality: timestamps, gaps and usable candles
02	Training: research candidate rules on historical data
03	Development: test performance, costs, trades and drawdown
04	Independent confirmation: check unused evidence
05	Controlled trial / execution: eligible models under checks

Status or label	How to interpret it
Waiting history repair	Data needs repair before reliable research can proceed.
Waiting confirmation	Earlier stages are not final approval; independent checks remain.
Qualified / approved	Passed the required checks at that time, not a guarantee of future profit.
Manual trial / confirmation pending	An administrator-controlled trial may be running before full qualification.
Paused / inactive	New entries are blocked. An existing position may still be managed according to its policy.

> Do not assume the default 2R position-box template is a model rule. SL, TP, sizing and exits belong to each model and its approved policy. Research can reject candidates or take longer; no model-completion date or trade frequency is guaranteed.

09 / Model reports, journal & alerts

1. Where published, inspect **Models on duty** for the model, timeframe and trial/qualification label. Check report freshness before treating the state as current.
2. Select a reported open position to inspect Entry, SL and TP on the chart. These belong to the published account, not automatically to your personal broker account.
3. In **Trade journal**, use search, direction, model and period filters. Select a row to inspect its levels; select again to clear. Use **Export CSV** where available.
4. Review net P/L, win rate and sample size together. Account equity can include the whole published account; journal results cover reconciled VYOMA trades in available history.
5. For **Trade sound**, enable it and use Test sound; keep the page open. For **Trade push**, use the toggle and your browser permission prompt if supported.

> Alerts follow newly reported entries, including manual trials. They do not place trades. Device sleep, network delay and browser notification settings can delay or prevent them.

Tools now; model development separately

Use VIP tools to explore zones and plan your own chart analysis. A published model, trade report or alert does not grant personal automated execution. Model research, validation and controlled tests continue separately. Future features and availability are announced on the website; they are not guaranteed by the current VIP plan.

Sections can be hidden, show Under development, or contain older snapshots. Follow the displayed status rather than assuming every module is live.

MEMBER GUIDE / ENGLISH / 11

10 / Renewal, quick help & next steps

1. Open My dashboard. Choose **Renew VIP** from **Menu** on mobile or from your membership card on desktop. Admin-granted and paid members can both renew through the paid checkout.
2. Review the current plan and checkout amount. Follow the payment screen instructions; access updates after payment verification. Manual renewal has no automatic charges.
3. Active VIP extends from its expiry; expired access starts again after verified payment. Refresh the dashboard to confirm the new expiry.

Problem	Try this
One-time code rejected	Use the latest email and exact digits, including zeros. A consumed/ expired code needs a new setup email from admin. After too many attempts, wait 15 minutes.
Personal password forgotten	Use Forgot password? on the login page. Do not keep reusing the welcome code.
VIP tools locked	Check the login email, dashboard expiry and status. Refresh after a grant or verified renewal.
Missing history / indicator	Check loaded range and bars required. Change timeframe and allow history to arrive; do not assume missing bars exist in replay.
Box cash amount looks wrong	Select the intended box, check Lots, then check the fixed XAUUSD convention. Pips and R:R are independent of lots.

Need help?

Email support@pratikalgo.com with the page, timeframe, approximate IST time and a screenshot that hides passwords, codes and payment secrets. Include your account email, but never your password.
